

Diagnostic Specialists select an initial diagnosis and order tests for a patient in the computer interface and update the patient chart. This patient chart is then forwarded to Med-Surg Specialists. Once the test results are received, the patient will display on Med-Surg Specialists list of cases.

Note: there may be a time delay waiting for test results.

Med-Surg Specialists Instructions:

1. Patient name should appear on your list of cases (lower left). Click on the name to see the Patient Chart. You will need to open the **Results** tab in the patient's folder. Read the test results carefully. Your main objective is to verify a Diagnosis based on these test results.

**Should test results not confirm diagnosis, send patient back to Diagnostic Specialists and ask them to review symptoms and diagnose. They will possibly need to order different tests and will need to update the patient chart.

2. Click on "Medi-Net" (lower right). In the left column, select the key **symptom**. Once selected, **diagnoses** will appear in the middle column. Med-Surg Specialists need to verify and select a **Final Diagnosis** in the computer.

3. Once selected, update the patient chart with the **Final Diagnosis**, sign and date the chart.

4. IMPORTANT: The final diagnosis must be passed along to the Case Manager to report to the Chief Medical Officer. CMO must confirm your findings before we send patient along for treatment with Clinical Intervention Specialists. The patient cannot proceed through the care process without this step.
