

Career Bingo

TEACHER GUIDE

Overview

In this activity students review what they know about science- and math-related careers. Students play bingo with cards having the names of the mission careers in the squares. As the teacher reads a career description or task, the students must recognize the career and place their chip in the appropriate square. The first student or student team to complete a line down, across, or diagonally wins.

Note: This activity should follow the other career exploration activities so students have familiarity with these careers.

Materials

- Copies of career bingo cards
- Bingo chips (or any other placeholder, such as colored pieces of paper or paper clips)
- Career descriptions

Procedure

1. Decide the game grouping. Your students can play career bingo individually or in teams.
2. Distribute the bingo cards and chips and review the directions with the students.
3. Allow enough time for the students to write the remaining careers in the squares.
4. Choose a career description at random from the list (next page and following). Read this aloud to the class and place a checkmark next to the item so you can remember what you have already read.
5. Direct the students to identify the career and to place their chip on the appropriate square.
6. Repeat the process for other careers.

7. The first student or student team with a complete line down, across, or diagonally wins.
8. Check the card for accuracy.
